

Chapitre 5 – Chaîne de caractères

Solution des exercices

Exercice 1

```
mot = input("Un mot ? ")  
  
print (mot[0].upper() + mot[1:])
```

Exercice 2

```
mot = input("Un mot ? ")  
  
print("La longueur du mot est: ", len(mot))
```

Exercice 3

```
mot = input("Un mot ? ")  
  
motInv = ""  
for car in mot:  
    motInv = car + motInv  
  
if mot == motInv:  
    print(mot, "est un palindrome")  
else:  
    print(mot, "n'est pas un palindrome")
```

Exercice 4

```
phrase = input("Un mot ? ")

phrase = phrase.lower()

phraseSansEspace = ""
for car in phrase:
    if car in "éèê":
        phraseSansEspace = phraseSansEspace + "e"
    elif car in "àâ":
        phraseSansEspace = phraseSansEspace + "a"
    elif car != " ":
        phraseSansEspace = phraseSansEspace + car

print(phraseSansEspace)

phraseInv = ""
for car in phraseSansEspace:
    phraseInv = car + phraseInv

print(phraseInv)

if phraseSansEspace == phraseInv:
    print(phrase, "est un palindrome")
else:
    print(phrase, "n'est pas un palindrome")
```

Exercice 5

```
print("Extraction de l'information")
print("(Exemple: 25:02:25.56 ouest)")
coord = input("Entrez la coordonnee : ")

coord, orien = coord.split()

deg, min, sec = coord.split(":")

print("degre : ", deg)
print("minute : ", min)
print("seconde : ", sec)
print("Orientation : ", orien)
```

Exercice 6

```
mot = input("Un mot ? ")
estChiffre = True

for car in mot:
    if not(car in "0123456789"):
        estChiffre = False

if estChiffre:
    print("C'est un chiffre")
else:
    print("Ce n'est pas un chiffre")
```

Exercise 7

```
chaine = input("Une chaine SVP: ")
nvChaine = chaine[0] + "---" + chaine[1:]
print(nvChaine)
```

Exercise 8

```
chaine = input("Une chaine SVP: ")
nvChaine = chaine[0:len(chaine)-1] + "---" + chaine[len(chaine)-1]
print(nvChaine)
```

Exercise 9

```
prenom = input("Prenom: ")
nom = input("Nom: ")

print("Bonjour " + prenom[0].upper() + prenom[1:].lower() + " " +
      nom.upper())
```

Exercise 10

```
chaine = input("Une Chaine SVP: ")
pos1 = chaine.find(" ") + 1
pos2 = chaine.find(" ", pos1)

print(chaine[pos1:pos2])
```
