

Chapitre 6: Listes

Solution des exercices

Exercice 1

```
entiers = [1, 2, 3, 5, 3, 9]

for entier in entiers:
    print(entier, end = ' ')
```

Exercice 2

```
entiers = [1, 2, 3, 5, 3, 9]

somme = 0

for entier in entiers:
    somme = somme + entier

print("somme =", somme)
```

Exercice 3

```
phrase = input("phrase ? ")

liste = phrase.split()

for mot in liste:
    print(mot)
```

Exercice 4

```
tabEntier = [7, 4, 6, 20, 12, 9]
print(tabEntier)

max = tabEntier[0]

for entier in tabEntier:
    if max < entier:
        max = entier

posMax = tabEntier.index(max)

print("max:", max)
print("position du max", posMax)
```

Exercice 5

```
noms = ["Stephane", "Charles", "Samuel", "Nathalie"]

for nom in noms:
    print(nom, len(nom))
```

Exercice 6

```
phrase = "Bonjour le monde"

mots = phrase.split()

max = len(mots[0]);
motMax = mots[0]

for mot in mots:
    if max < len(mot):
        max = len(mot)
        motMax = mot

print("Le mot le plus long est:", motMax)
```

Exercice 7

```
phrase = input("Une phrase svp: ");

mots = phrase.split()

min = len(mots[0]);
motMin = mots[0]

for mot in mots:
    if min > len(mot):
        min = len(mot)
        motMin = mot

print("Le mot le plus court est:", motMin)
```

Exercice 8

```
liste = input("entrer une liste de nombre séparé par des ';': ")
nombres = list(map(float, liste.split(";")))

somme = 0
for nb in nombres:
    somme = somme + nb

print("La moyenne est: ", (somme/len(nombres)))
```
