

Chapitre 5 : Chaîne de caractères

Solution des exercices

Exercice 1

Expression	Valeur
lieu.length()	17
lieu.substring(5,9)	ier
lieu.charAt(12)	n
lieu.indexOf("hun",3)	10
lieu.indexOf("v")	-1
lieu.substring(0,5).toUpperCase()	QUART

Exercice 2

```
public class Chap5Ex2 {  
    public static void main(String[] args) {  
        String lieu = "Quartier Ahuntsic";  
  
        System.out.println("lieu.length() = " + lieu.length());  
        System.out.println("lieu.substring(5,9) = " + lieu.substring(5,9));  
        System.out.println("lieu.charAt(12) = " + lieu.charAt(12));  
        System.out.println("lieu.indexOf(\"hun\",3) = " + lieu.indexOf("hun",3));  
        System.out.println("lieu.indexOf(\"v\") = " + lieu.indexOf("v"));  
        System.out.println("lieu.substring(0,5).toUpperCase() = " + lieu.substring(0,5).toUpperCase());  
    }  
}
```

Exercice 3

```
import java.util.Scanner;

public class Chap5Ex3 {

    public static void main(String[] args) {
        int nbCaracteres;
        String nom;
        String prenom;
        Scanner sc = new Scanner(System.in);

        System.out.print("Nom ? ");
        nom = sc.nextLine();

        System.out.print("Prenom ? ");
        prenom = sc.nextLine();

        nbCaracteres = nom.length() + prenom.length();

        System.out.println("Nombre de caractères : " + nbCaracteres);
    }
}
```

Exercice 4

```
import java.util.Scanner;

public class Chap5Ex4 {

    public static void main(String[] args) {
        String mot;
        Scanner sc = new Scanner(System.in);

        System.out.print("Mot ? ");
        mot = sc.nextLine();

        if(mot.charAt(0) == mot.toUpperCase().charAt(0)){
            System.out.println("La première lettre est une majuscule");
        }
        else{

```

```

        System.out.println("La première lettre est une miniscule");
    }
}

```

Exercice 5

```

import java.util.Scanner;

public class Chap5Ex5 {

    public static void main(String[] args) {
        String mot;
        Scanner sc = new Scanner(System.in);

        System.out.print("Mot ? ");
        mot = sc.nextLine();

        System.out.println(mot.charAt(0) + "---" + mot.substring(1));
    }
}

```

Exercice 6

```

import java.util.Scanner;

public class Chap5Ex6 {

    public static void main(String[] args) {
        String mot;
        Scanner sc = new Scanner(System.in);

        System.out.print("Mot ? ");
        mot = sc.nextLine();

        System.out.println(mot.substring(0,mot.length()-1) + "---" + mot.charAt(mot.length()-1));
    }
}

```

Exercise 7

```
import java.util.Scanner;

public class Chap5Ex7 {

    public static void main(String[] args) {
        String nom;
        String prenom;
        Scanner sc = new Scanner(System.in);

        System.out.print("Nom ? ");
        nom = sc.nextLine();

        System.out.print("Prenom ? ");
        prenom = sc.nextLine();

        nom = nom.toUpperCase();
        prenom = prenom.substring(0,1).toUpperCase() + prenom.substring(1).toLowerCase();

        System.out.println("Bonjour " + prenom + " " + nom);
    }
}
```

Exercise 8

```
import java.util.Scanner;

public class Chap5Ex8 {

    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String phrase;
        int pos1;
        int pos2;
        System.out.print("Votre phrase ? ");

        phrase = sc.nextLine();

        pos1 = phrase.indexOf(" ");
        pos2 = phrase.indexOf(" ", pos1 + 1);
```

```
}  
    }  
    System.out.println("Le résultat: " + phrase.substring(pos1+1, pos2));
```
